Creating Generative Art with Processing

Processing enables the creation of intricate generative artworks through simple code structures. For example, generating fractals, organic patterns, or data-driven visualizations can be achieved with minimal code.

Sample code snippet for a basic generative pattern:

```
```java

void setup() {

size(800, 800);

background(255);

noLoop();

}

void draw() {

for (int i = 0; i
float x = random(width);
```

```
float y = random(height);

float size = random(10, 50);

fill(random(255), random(255), random(255));

ellipse(x, y, size, size);

}

}

...
```

This simple script randomly places colorful circles across the canvas, demonstrating how randomness and parameters can generate unique visuals.
