Dissecting Specific Exercise Types in Patrick J. Hurley's Philosophy and Logic Texts

Let's explore some common exercises, their typical challenges, and how to approach them effectively.

Analyzing Arguments and Identifying Fallacies

Exercise Focus: Determine whether an argument is valid, invalid, or contains a fallacy.

Method:

- Map out premises and conclusion.
- Check for logical consistency.
- Be familiar with common fallacies (e.g., straw man, false dilemma).

Sample Approach:

Suppose an argument states, "All philosophers are wise. Socrates is wise. Therefore, Socrates is a philosopher." The conclusion is invalid because the premise does not guarantee the conclusion. Recognizing this fallacy (affirming the consequent) is key.

Evaluating the Validity of Logical Forms

Exercise Focus: Test whether a logical structure is valid.

Method:

- Translate the argument into standard form or symbolic logic.
- Use truth tables or formal proof methods.

Sample:

Given the argument:

- If it rains, the ground gets wet.
- It rains.
- Therefore, the ground gets wet.

This is a valid modus ponens argument. Recognizing these forms helps in quickly confirming validity.

Constructing Counterexamples

Exercise Focus: Demonstrate invalidity by providing a counterexample.

Method:

- Find a scenario where premises are true but the conclusion is false.
- Use this to show the argument is invalid.

Example:

For the invalid argument "All cats are animals. Fido is an animal. Therefore, Fido is a cat," a counterexample would be Fido being a dog, indicating the argument is invalid.
