- Coolant hoses
- Cooling fan
- Coolant reservoir (overflow tank)
- Temperature sensors
- Heater core (for cabin heating)

Detailed Breakdown of the Nissan Xterra Cooling System Diagram

1. Radiator

The radiator acts as the central component where heat exchange occurs. Coolant flows through the radiator, releasing heat to the outside air, typically aided by the cooling fan. The radiator is positioned at the front of the vehicle, directly exposed to airflow during movement.

2. Water Pump

The water pump is responsible for circulating coolant throughout the engine and radiator. Driven by a belt connected to the engine crankshaft, it ensures constant movement of coolant, preventing localized overheating.

3. Thermostat

The thermostat regulates coolant flow based on temperature. When the engine is cold, the thermostat remains closed, allowing the engine to warm up quickly. Once the optimal temperature is reached, it opens to allow coolant to flow into the radiator for cooling.

4. Coolant Hoses

Flexible hoses connect all major components, guiding coolant through the engine, radiator, heater core, and overflow reservoir. They must withstand high temperatures and pressures, making their integrity vital for system performance.

5. Cooling Fan

The cooling fan enhances airflow through the radiator, especially when the vehicle is stationary or moving slowly. The fan can be mechanically driven or electrically operated, controlled by thermostatic switches or temperature sensors.

6. Coolant Reservoir (Overflow Tank)

This tank stores excess coolant and accommodates volume changes due to temperature fluctuations. It helps maintain proper coolant levels and prevents air from entering the system.

7. Temperature Sensors

These sensors monitor engine temperature and relay data to the vehicle's engine control unit (ECU). They also control cooling fan activation and send signals to regulate the thermostat and other components.

8. Heater Core

The heater core, a small radiator inside the cabin, uses hot coolant to produce warm air for the vehicle's heating system. It taps into the coolant circuit, ensuring engine heat is efficiently utilized for passenger comfort.
