Sample Practice Question and Walkthrough

Question:

A practical nurse is caring for a patient who has just undergone a total hip replacement. Which of the following instructions should the nurse include in patient teaching?

- A) Avoid bending the hip more than 90 degrees.
- B) Keep the affected leg in a dependent position when sitting.
- C) Use a pillow between the legs when turning.
- D) Flex the hip to 120 degrees when sitting in a chair.

Correct Answer: A) Avoid bending the hip more than 90 degrees.

Rationale:

Patients with total hip replacements are instructed to avoid excessive hip flexion to prevent dislocation. Keeping the hip flexed beyond 90 degrees increases the risk of dislocation. Using a pillow between the legs (option C) can help maintain proper positioning, but the key teaching point is

limiting hip flexion. Maintaining the leg in a dependent position (option B) is incorrect; elevation and proper positioning are usually recommended. Flexing the hip to 120 degrees (option D) exceeds safe limits and should be avoided.

Learning Point:

Always focus on the primary safety instructions relevant to the patient's condition, and understand the rationale behind each teaching point.
