Building Your First WDK Application

Step 1: Create a New Web Application

Using your IDE:

- Generate a new Dynamic Web Project.
- Include WDK libraries in your build path.
- Configure `web.xml` for WDK-specific settings.

Step 2: Define Content Types

Content types specify the structure of documents and objects:

- Use Documentum Composer or DQL scripts.
- Create custom object types if necessary.
- Register these types within your application.

Step 3: Develop Web Components

- Forms: For data entry and editing.
- Views: To display lists or document details.
- Actions: Buttons or links triggering workflows or operations.

Example: Creating a Document Upload Form

```
```java

// Instantiate a form component for uploading documents

DocumentUploadForm uploadForm = new DocumentUploadForm();

uploadForm.setRepository(repositoryName);

uploadForm.setObjectType(objectType);

```
```

Step 4: Program Business Logic

Implement custom logic:

- Handle validations.
- Automate workflows.
- Integrate with external systems.

- Deploy your application on the application server.
- Access via web browser.
- Test different functionalities thoroughly.

Key Concepts in WDK Development

Content Repository Interaction

WDK provides APIs to perform CRUD (Create, Read, Update, Delete) operations:

- Use `IDfSession`` and `IDfCollection`` for querying.
- Use `IDfSysObject`` for managing documents.

Example: Querying documents

```
``java
```

```
String query = "SELECT r_object_id, object_name FROM dm_document WHERE object_name  
LIKE 'Report%'";
```

```
IDfCollection coll = session.executeQuery(query);
```

```
while (coll.next()) {
```

```
String objectId = coll.getString("r_object_id");
```

```
String name = coll.getString("object_name");
```

```
// Process retrieved documents
```

```
}
```

```
...
```

Customizing User Interfaces

WDK's component model allows:

- Creating custom forms with validation.
- Designing intuitive views.
- Adding actions like check-in/check-out, delete, or custom workflows.

Workflow Management

Workflows automate document lifecycle processes:

- Use Documentum Workflow Designer.
- Integrate workflows into WDK applications via APIs.
